

CREATE IBM WATSON IOT PLATFORM AND DEVICE

TEAM ID	PNT2022TMID20430
PROJECT NAME	IOT Based Smart Crop Protection System for Agriculture

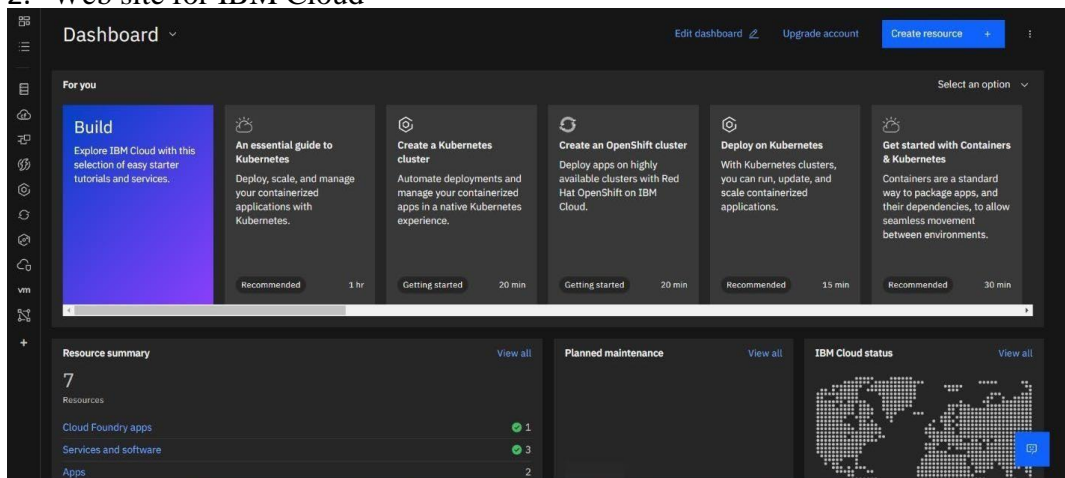

IBM Watson IOT platform and device development

STEPS:

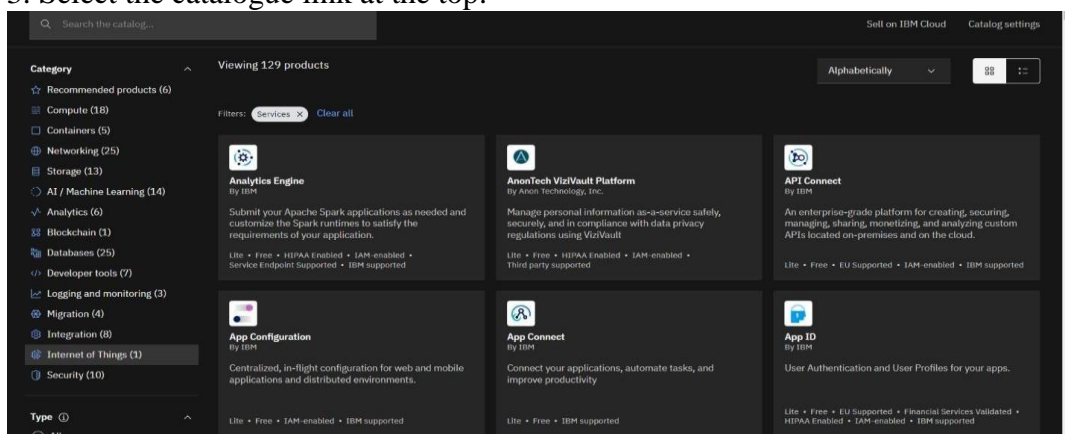

1. The unique IBM id and password are used to create an IBM cloud account.

2. Web site for IBM Cloud

3. Select the catalogue link at the top.

4. Select IoT from the list of categories.

Internet of Things Platform

This service is the hub of all things IBM IoT, it is where you can set up and manage your connected devices so that your apps can access their live and historical data.

Ready for the next level?

IBM Watson IoT Platform Journey

✓ Lite

The Lite service plan provides a lightweight development environment to get you started with the connectivity capabilities of Watson IoT Platform.

- Free

○ Non-Production

The Non-Production service plan is a full-featured, fully-integrated offering that enables you to explore Watson IoT Platform to see how the service can fit into your IoT environment.

- Starts at \$300 per month

○ Production

The Production service is a fully managed SaaS offering that enables you to manage and analyze enterprise IoT data.

- Includes IBM Service & Support

9. The connection is used to link IOT with other services, while manage is for launch and plan informs us about the payment package and its upgrades.

Plan	Features	Pricing
Lite	<p>Includes up to 500 registered devices, and a maximum of 200 MB of each data metric</p> <ul style="list-style-type: none"> Maximum of 500 registered devices Maximum of 500 application bindings Maximum of 200 MB of each of data exchanged, data analyzed and edge data analyzed 	Free

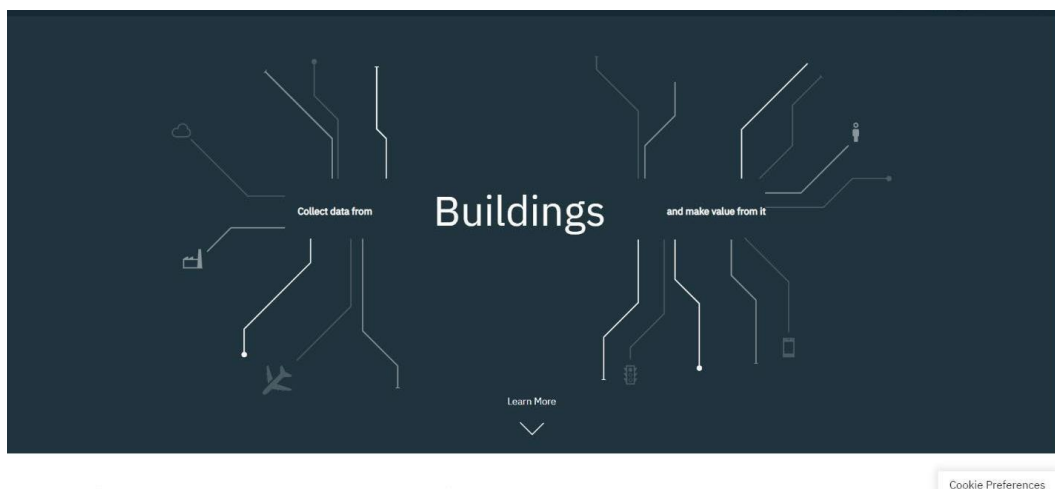

10. When you click the launch button on the Manage tab, this page will appear.

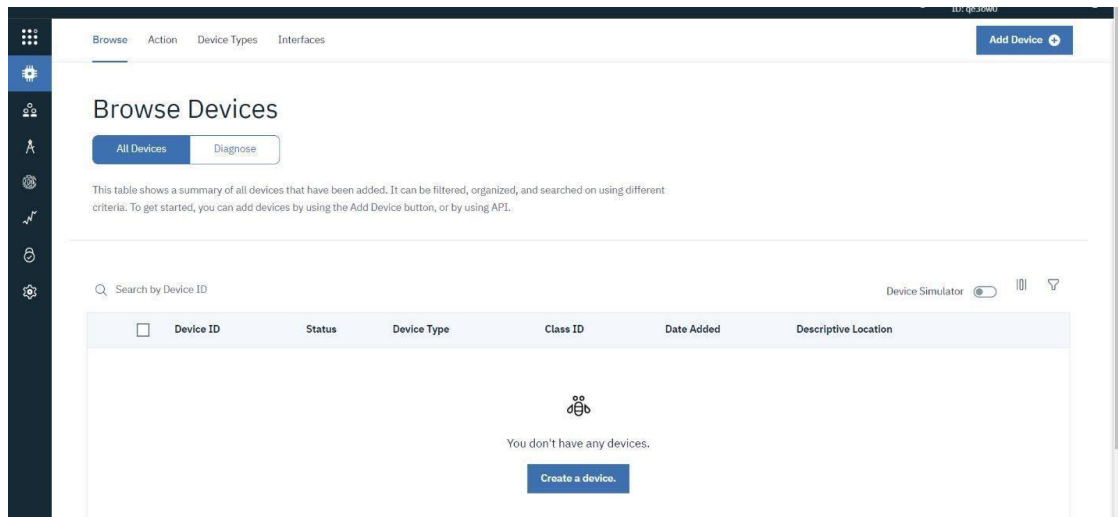

11. Fill in the information to create a device by logging into the Watson Cloud.

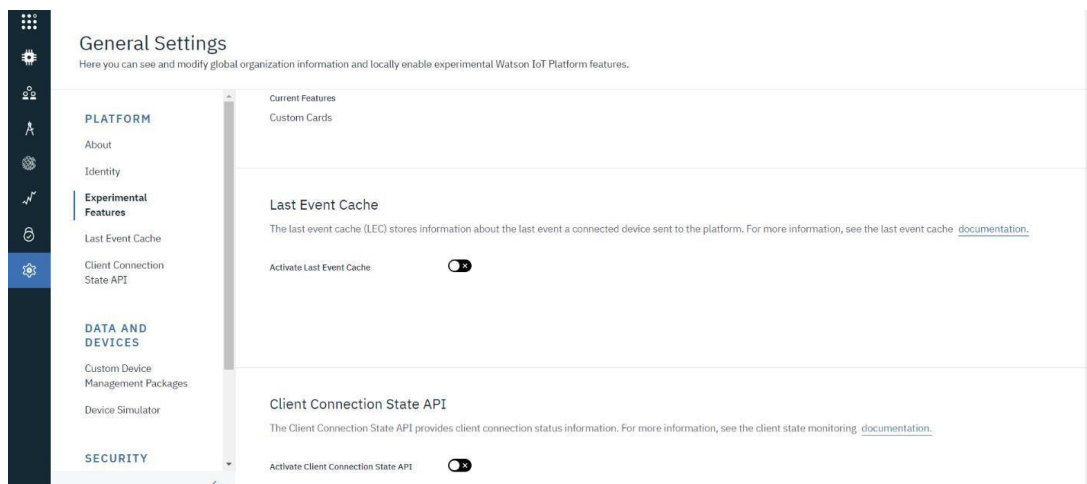

12. After logging in, the name is displayed and the page returns to the home page.

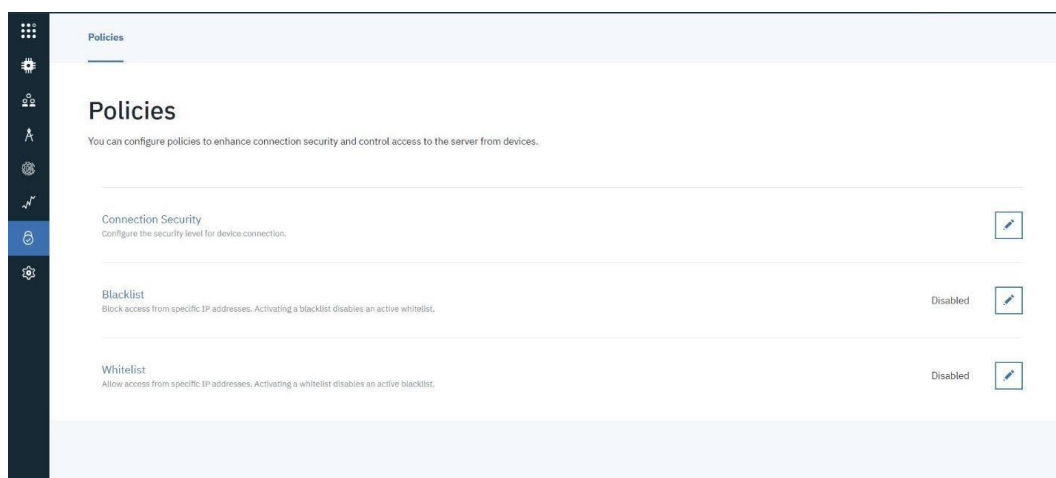

13. Clicking the launch button once more will open this tab, which contains a tool for creating and adding devices as well as for displaying information about them.

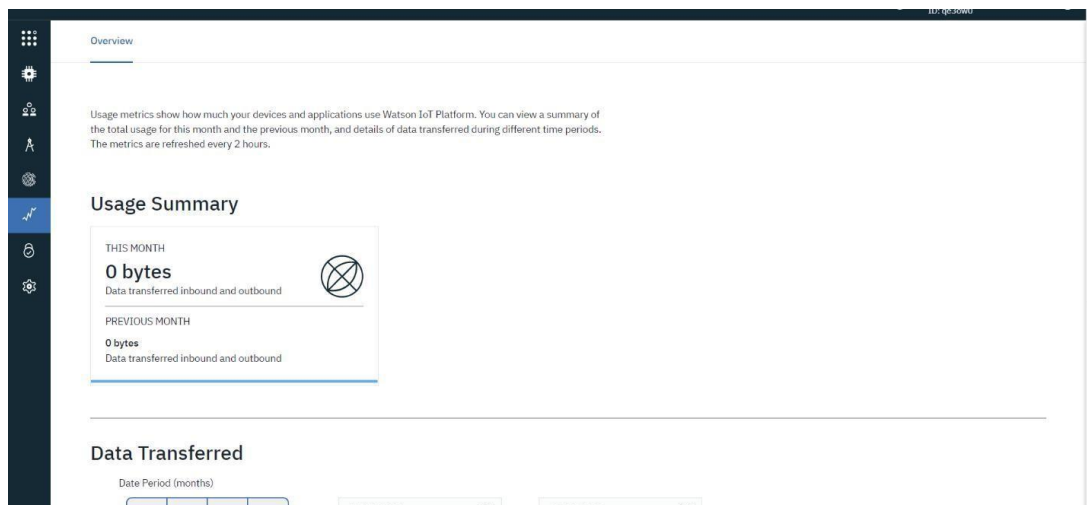

14. If necessary for the project, the general setting can be changed using the setting tab.

15. We can change the type of security connection and the specification in the security tab.

16. Usage summarises the amount of data transferred between the devices and the IBM cloud.

17. The team members are added to the platform through the member tab.

The screenshot shows the 'Browse Members' page. It includes a search bar and a table with columns: Email Address, Name, Role, Added By, and Expires. One member is listed with the email 'worldisfullofmeow@gmail.com' and the role 'Administrator'.

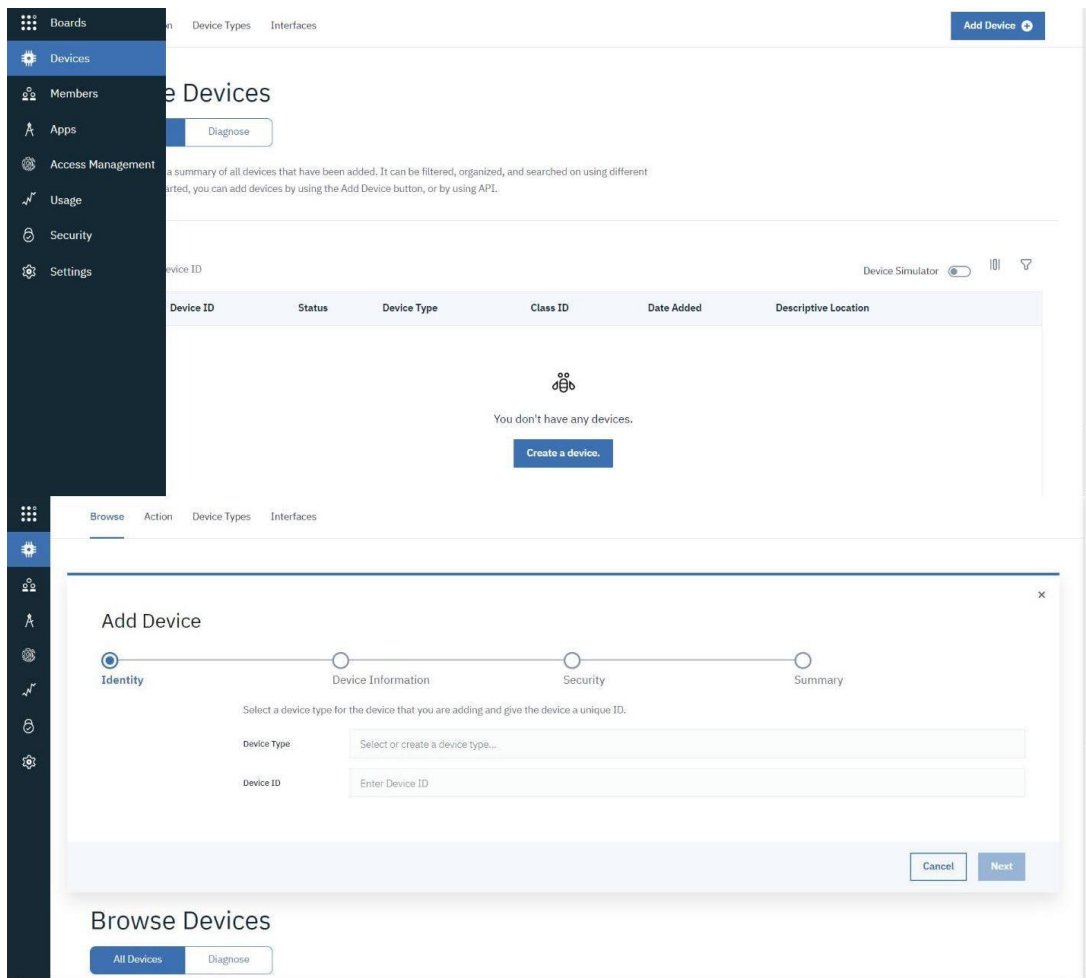

Email Address	Name	Role	Added By	Expires
worldisfullofmeow@gmail.com	worldisfullofmeow@gmail.com	Administrator	-	-

18. When you want to connect to another platform and integrate with other services, you use this tab.

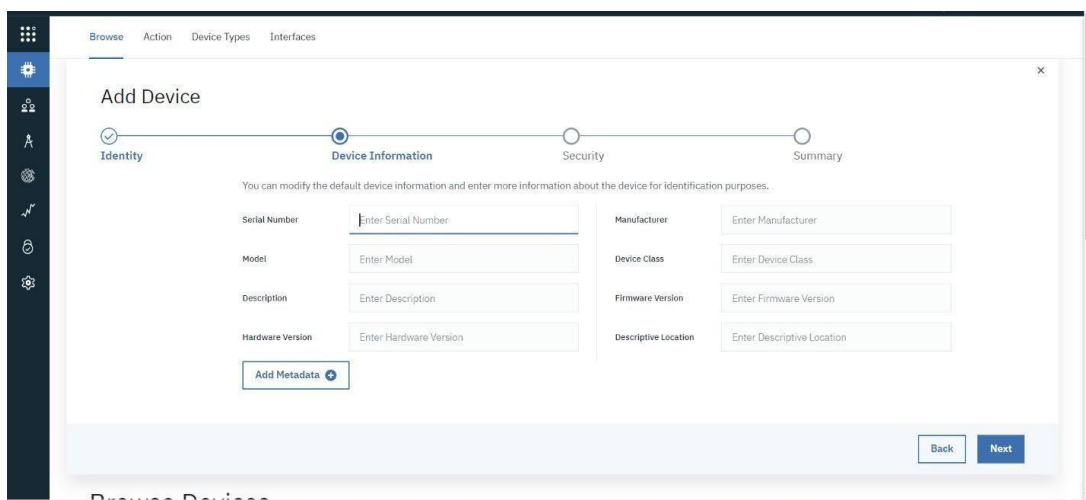

The screenshot shows the 'Browse API Keys' page. It includes a search bar and a table with columns: Key, Description, Role, and Expires. The table is empty, and a message at the bottom states 'There are no API Keys' with a 'Generate API Key' button.

Key	Description	Role	Expires
-----	-------------	------	---------

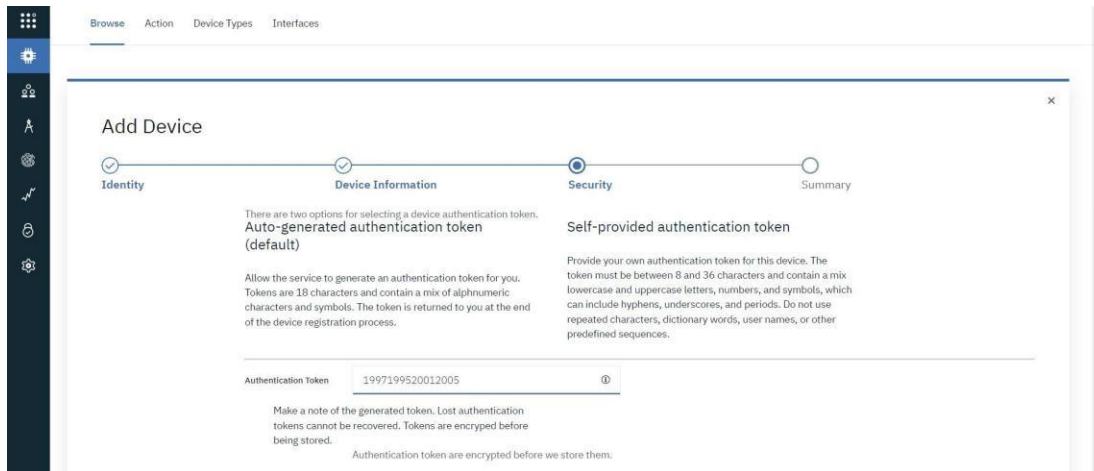

19. Select the device tab, select Add Device, enter the device type and device id, and select Next.

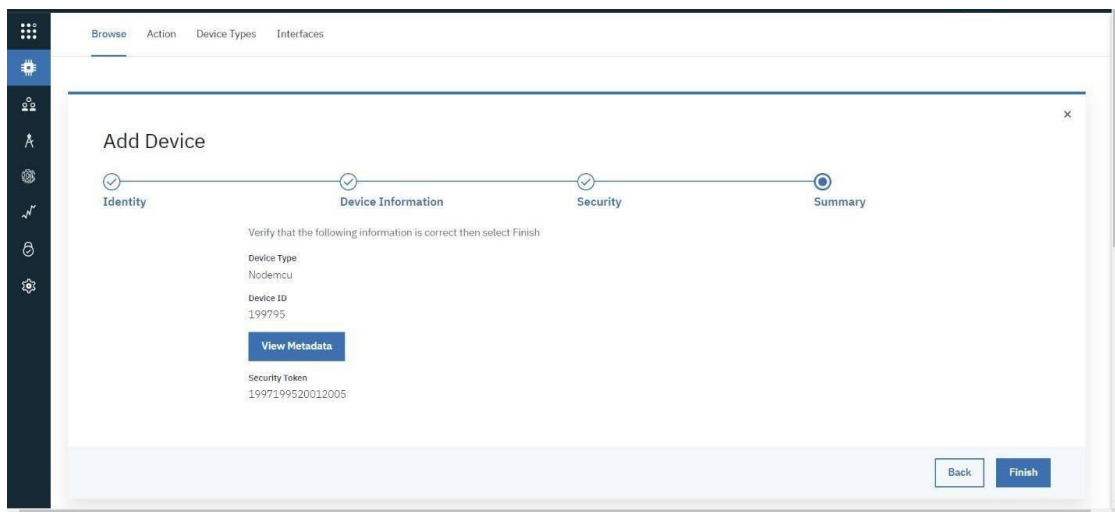

20. This page to add additional information and of the hardware

21. After clicking next, the security screen appears, where we perform authentication token id.

22. After selecting Next, the device's summary is displayed. Finally, select Finish.

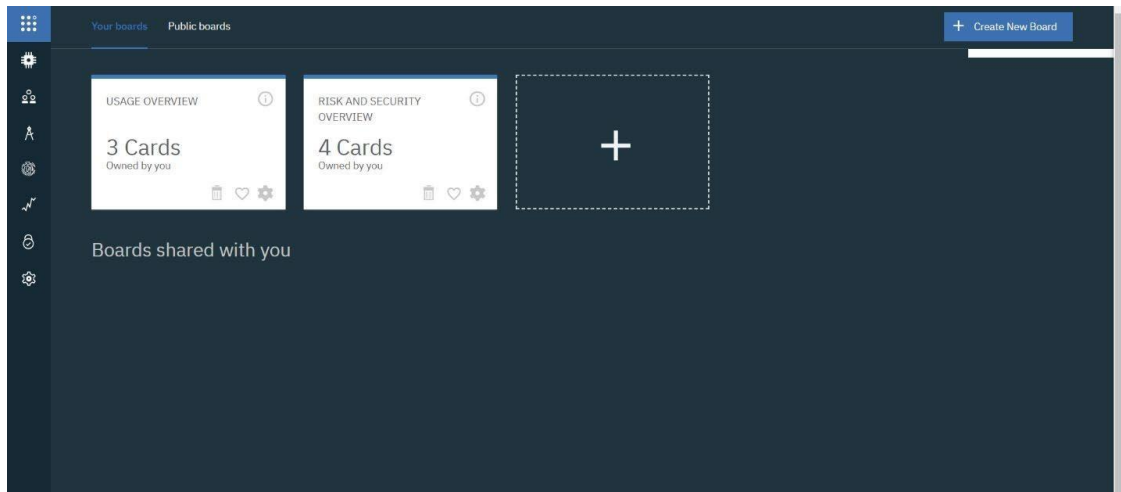

23. A detailed display of the device credentials will appear.

24. Protect the device information because authentication tokens are non-recoverable and must be created anew if lost..

25. We can now see the newly inserted device by clicking the device tab. The further information will be shown when you click on it. There are several tabs on it, including Identity, Device Information, State, and Login. According to the specifications of our project, we can similarly create n number of devices with a 50 per page limit.

26. The project cards will be displayed on the boards.

CONCLUSION:

A device and an IBM Watson cloud are developed.
